

MOLD FOR DENTAL MODEL

ABSTRACT OF THE DISCLOSURE

- A mold for forming a dental model base includes a bottom portion having a rear wall and a side wall at a periphery thereof which extends upwards to define a cavity.
- 5 The walls have upper edges which define an opening to the cavity. The mold further includes a shaping element for forming a connection element of a pivot mechanism at the dental model base which rotationally mates with a corresponding connection element of the articulator.
